Energy Retrofit Project

Centennial Pool

Essential Upgrades Required

Accessibility

- Extend lifespan—upgrades ensure Centennial Pool remains operational for all user groups and the community
- Improved, barrier-free accessibility
- User-friendly design upgrades—lobby, locker rooms and washrooms (subject to funding approval)

Essential Upgrades Required— Capital funds have been approved for extensive renovations to Centennial Pool. The work will extend the life of the building for an additional 20 years and significantly reduce the operating expenses with the installation of new energy efficient systems. Short term pain for long term gain... the facility will have to close for the duration of the work but we promise it will be worth it!

Clean Air

- Measures will be taken to improve air quality
- Upgraded ventilation system will ensure healthy air-flow
- New dehumidifier will reduce the current high humidity levels and reduce the corrosive effects in the pool area

Clean Water

- New pool filtration system
- Upgraded plumbing—including low-flow fixtures.
- Reduced water use

Clean Energy

- Solar hot water—40 solar panels will provide domestic hot water for Centennial Pool
- Heat recovery—the new mechanical system will minimize energy use, lower humidity levels and recover “waste” heat to warm the pool water
- District Energy—New natural gas boilers and solar panels are being installed at the Halifax Police Department. The buildings will have a shared heating system connected by an underground trench
- Removal of old, inefficient mechanical system and boilers
- Update electrical system to current codes
