

# Where do your downspouts and/or sump pumps discharge?

If they are connected and you do not know where they discharge, please call us at 490-RAIN (7246)

**Discharging onto the ground will not work in all areas.** Your ability to implement this solution will depend on local groundwater conditions, slope, soil types and proximity to other properties. Work may be required on your property to ensure this practice does not cause drainage issues on your property nor neighboring properties. You must also ensure that this will not cause icing concerns on private and public properties during the winter months. You may have to contact a qualified contractor to assist you. If you have questions, please contact Halifax Water at 490-RAIN (7246) or [rain@halifaxwater.ca](mailto:rain@halifaxwater.ca).
