Water Valve Replacement Project Complete

(Thursday, October 27, 2011) – Halifax Water crews have completed valve replacement work at the intersection of Gottingen and Kaye Streets.

Full transition to normal water supply patterns will take place early this evening.

There is a possibility slight discolouration could be experienced by some customers. The water is not a health hazard. Halifax Water does not anticipate any drop in water pressure.

Halifax Water apologizes for any inconvenience this necessary valve replacement work may have caused.
