

THREE STEPS TO COST-EFFECTIVE APARTMENT AND CONDO HEAT PROTECTION

Step 1: Plan ahead to keep cool

Do-it-yourself, \$0

1 Help vulnerable neighbours, family, friends prepare and arrange to check on them during heat events.

2 Sign up for heat alerts on your phone (e.g., [WeatherCan](#)).

3 Learn how to best use windows and doors to naturally ventilate your unit, particularly at night.

4 Choose energy efficient lights and appliances that produce less "waste" heat.

5 Arrange to work or sleep in a cooler place (e.g., shared cooling space).

Step 2: Complete simple upgrades

Do-it-yourself, for under \$250

1 Green your balcony or deck with potted, hanging and climbing plants.*

2 Place tall plants with large leaves near light-facing windows.

3 Improve unit insulation and air tightness (e.g., draft strips).

4 Install blinds, heat-resistant curtains, or films on windows.

5 Use portable or ceiling fans that increase air circulation.

Step 3: Complete more complex upgrades

With building managers, for over \$250

1 Install temperature and humidity monitors or controls.

2 Paint unit walls with white paint or light colours.

3 Shade windows with outdoor shutters and awnings.

4 Install windows and doors with low Solar Heat Gain Coefficients, that let less heat in.

5 Install and maintain a heat pump or air conditioning unit.

* In places at risk of wildfire, the use of green infrastructure must be considered alongside [FireSmart™](#) guidance.
